

Transplant Shock Eliminator

Transcend-Plantal Meditation is a natural source of plant bio-stimulants from the North Atlantic Ocean that trigger numerous beneficial plant responses...the most important of which is the total elimination of transplant shock. Plants can be transplanted repeatedly without any downtime. Often, transplants made without this aid can take as many as 2-3 weeks to recover from the shock. Moreover, T-Plantal Meditation gives plants the resilience, health, and vigor they'll need to reach their genetic potential. It's a water soluble powder (WSP).

Directions: We recommend mixing two level teaspoons of the powder/gallon of water (dissolved in a small amount of warm water first). Apply to soil (not to foliage). Transplant cubes or blocks can be soaked in the solution for 15 minutes before transplanting. If soaking is impractical, drench the soil with the solution immediately after transplanting and repeat daily for 5 days. Mix only what is needed for the immediate application. Flush irrigation systems after each use.

Note: For more info, detailed mixing, and use instructions visit our website below.

T-Plantal Meditation is available in 14 oz. containers
