

Angel's Touch WSP - Specifications

This product is compliant with organic production standards as outlined by the National Organic Program of the USDA.

Properties – Angel's Touch fertilizer contains soluble ingredients. Once dissolved, the solids in this product will not settle out. However, it is important to thoroughly dissolve the necessary dose in warm water before adding it to your tank or siphon reservoir.

Biological Activity – Microorganisms are abundant everywhere and, given an ample supply of nutrients and water, they will multiply and sometimes create objectionable odors. Angel's Touch is stable as a dry powder but, once it's dissolved in water, it can become biologically active. Mix only what you'll need for the immediate application. If you're using an irrigation system, flush with clear water after each use.

Angel's Touch is a natural source of humic acid and bio-stimulants from the cold waters of the North Atlantic Ocean that trigger responses such as disease resistance, faster and denser root development, stress resistance, improved growth and development, better seed germination, improved cloning, better micronutrient utilization, greater trichome production, and aids plants in the production of essential enzymes. Starting plants with Angel's Touch gives them the resilience, health, and vigor they need to reach their genetic potential.

Dose – We recommend mixing 2 level teaspoons of the powder per gallon (dissolved in a small amount of warm water first). Apply to soil (not to foliage). Apply weekly from seed (or clone) to harvest.

Application - Angel's Touch is best applied to the soil. Although, not designed for foliar use, it can be foliar applied up to the flower development stage.

EC: The recommended mixing rate will not increase the total liquid EC by more than 0.6 mS/cm.

Density: There are ~10.5 level teaspoons of Angel's Touch powder per ounce. At the mix rate of 2 level teaspoons per gallon, an 11-ounce container will make ~58 gallons of ready-to-use liquid fertilizer.

Material Review: Angel's Touch has been reviewed and approved by Clean Green Certified™. All ingredients are NOP compliant.

Analysis:

Total Nitrogen (N).....0.5%

0.5% Water soluble nitrogen

Soluble Potash (K₂O)..... 17.0%

Derived from: Seaweed extract and soluble humates
